

JUL 20 2006

Attorney Docket: 112.P55009

AMENDMENTS

IN THE TITLE:

Please amend the title as follows:

~~Apparatus for Broadcasting Digital Audio and Video Signal~~ Optical Reading
Device Capable of Processing Video Signal From Memory Card

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. Where claims have been amended and/or canceled, such amendments and/or cancellations are done without prejudice and/or waiver and/or disclaimer to the claimed and/or disclosed subject matter, and the applicant and/or assignee reserves the right to claim this subject matter and/or other disclosed subject matter in a continuing application.

1-17. Cancelled

18. (Currently Amended) An optical media reading device apparatus,
comprising:

~~an optical reading device comprising:~~

a signal output port;

a memory card slot capable of receiving a memory card;

a digital video and audio decompressing card ~~coupled to said optical~~

~~reading device and further~~ coupled to said memory card slot and capable of processing a video signal from the memory card; and

a memory comprising a built-in program capable of processing video and audio operations.

19. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said digital video and audio decompressing card comprises a digital video and audio decompressing chip and the memory.

20. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said digital video and audio compressing chip supports decompressing processes of MPEG layer 2 and layer 3 for decompressing video and audio signals which are stored in said memory card.

21. (Currently Amended) The optical media reading device apparatus of claims 18, wherein said signal output port is capable of outputting decompressed video and audio signals to a display device.

22. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said optical media reading device comprises a DVD device.

23. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said memory card comprises a compact flash card.

24. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said memory card slot comprises an adapter for adapting another memory card into said memory card slot.

25. (Currently Amended) The optical media reading device apparatus of claim 24, wherein said another memory card comprises a secure digital card.

26. (Currently Amended) The optical media reading device apparatus of claim 18, wherein said built-in program is adapted to identify GIF format files stored on said memory card.

27. (Currently Amended) A method, comprising:
determining a file format for a compressed digital image stored on a memory card;
reading the compressed digital image from the memory card;
decompressing the compressed digital image; and
outputting the decompressed image at an output port, wherein determining a file format, reading the compressed digital image, decompressing the compressed digital image, and outputting the decompressed image are performed by [[a]] an optical media reading device.

28. (Previously Presented) The method of claim 27, wherein decompressing the compressed digital image includes executing a program on a video decompressing chip wherein the program is built-in to a memory coupled to the decompressing chip.

29. (Previously Presented) The method of claim 27, wherein determining a file format includes identifying a JPEG format file.

30. (Previously Presented) The method of claim 27, wherein reading the compressed digital image includes reading a compressed digital image from a PCMCIA format memory card.

31. (Previously Presented) The method of claim 27, wherein reading the compressed digital image includes reading a compressed digital image from a memory card inserted into an adapter that is inserted into a memory card slot in the optical media reading device.

32. (Previously Presented) An apparatus, comprising: an optical media reading device adapted to:

determine a file format for a compressed digital image stored on a memory card;

read the compressed digital image from the memory card;

decompress the compressed digital image; and

output the decompressed image at an output port.

33. (Previously Presented) The apparatus of claim 32, wherein the optical media reading device is further adapted to decompress the compressed digital image by executing a program on a video decompressing chip wherein the program is built-in to a memory coupled to the decompressing chip.

34. (Previously Presented) The apparatus of claim 32, wherein the optical media reading device is further adapted to determine the file format by identifying a JPEG format file.

35. (Previously Presented) The apparatus of claim 32, wherein the optical media reading device is further adapted to read the compressed digital image from a PCMCIA format memory card.

36. (Previously Presented) The apparatus of claim 32, wherein the optical media reading device is further adapted to read the compressed digital image from a memory card inserted into an adapter that is inserted into a memory card slot in the optical media reading device.
